# Introduction

This document sets out the Charges and other amounts payable in connection with the **nbn**® Ethernet Product.

Charges in this **nbn**® Ethernet Price List are separated into recurring Charges, non-recurring Charges and other Charges. Recurring Charges are periodic amounts which are payable in each Billing Period that a product or service is supplied by **nbn** to RSP. Non-recurring Charges and other Charges are payable only when certain activities or events occur (e.g. installations, disconnections).

Discounts, credits, rebates and waivers to Charges in this **nbn**® Ethernet Price List may be offered from time to time, as set out in this **nbn**® Ethernet Price List and Discounts, Credits and Rebates Annexures.

Certain provisions of this **nbn**® Ethernet Price List may be affected by the terms of an SAU.

This document forms part of the **nbn**® Ethernet Product Module.

## Part A: Recurring Charges

Section 1 sets out the recurring Charges which apply to the **nbn**® Ethernet Product Components which RSP must acquire as part of **nbn**® Ethernet. The specific Charges which apply to an Ordered Product depend on the Product Features selected by RSP (e.g. bandwidth profile).

### 1. Recurring Charges for core components

#### 1.1 TC-4 Bundle Charges

- (a) The recurring Charges per Billing Period for the following AVC TC-4 Product Components (**TC-4 Bundle AVCs**) and associated CVC TC-4 inclusions, are:<sup>1</sup>

<b>nbn</b> ® Network	AVC TC-4 downstream Mbps <sup>2</sup>	AVC TC-4 upstream Mbps <sup>2</sup>	CVC TC-4 symmetrical Mbps inclusion <sup>2,3</sup>	Recurring Charge
Fibre, FTTB, FTTN, FTTC and HFC	12 (Basic Bundled Offer) <sup>4</sup>	1 (Basic Bundled Offer) <sup>4</sup>	0	\$12.00
Fibre, FTTB, FTTN, FTTC, HFC and Wireless	12	1	0	\$28.64
Fibre, FTTB, FTTN, FTTC, HFC and Wireless	25	5	0.31	\$29.81
FTTB and FTTN	25	5 – 10	0.31	\$29.81
Fibre, FTTC and HFC	25	10	0.31	\$29.81
FTTB and FTTN	25 – 50	5 – 20	3.72	\$54.20
Fibre, FTTC and HFC	50	20	3.72	\$54.20
Wireless	Wireless Plus		3.72	\$54.20

**Notes:**

<sup>1</sup> Each AVC TC-4 Product Component listed in this table is supplied in accordance with the specified TC-4 Bundle Charge for the AVC TC-4 and CVC TC-4 inclusion and is not available under a separate standalone Charge.

The CVC TC-4 inclusions are not automatically provisioned. RSP may order any CVC TC-4 bandwidth profile available under the [nbn® Ethernet Product Description](#). RSP must then order the relevant AVC TC-4 Product Component and associate that AVC TC-4 Product Component with the CVC TC-4.

Additional CVC TC-4 charges apply in accordance with section 1.1(b) for any CVC TC-4 utilised in excess of the CVC TC-4 inclusion associated with any TC-4 Bundle AVC (where the utilisation relative to the inclusion is determined on a per-AVC TC-4 Product Component basis).

<sup>2</sup> The Information Rates shown in this table are Peak Information Rates (PIR) with the exception of the Wireless Plus AVC TC-4, which is a potential maximum Information Rate. To be read subject to sections 3.2, 3.8 and 13 of the [nbn® Ethernet Product Description and](#) section 4.1.3 of, and Appendix B to, the [nbn® Ethernet Product Technical Specification](#).

<sup>3</sup> The CVC TC-4 inclusions specified in this table will be updated from time to time as notified by **nbn** to RSP in accordance with clause F4.9(c)(ii) of the [Head Terms](#).

<sup>4</sup> The Basic Bundled Offer and associated Charge applies in respect of an AVC TC-4 with a bandwidth profile of 12/1 Mbps on a given day if:

- RSP uses that AVC TC-4 as an input into an RSP Product or Downstream Product which is a broadband service which includes a voice component; and
- that AVC does not utilise, on average, more than 0.1 Mbps of capacity during any 60-minute period on that day.

Otherwise, **nbn** will apply the Charge for the 12/1 Mbps AVC TC-4 bandwidth profile which is not the Basic Bundled Offer. The two different Charges will be calculated and applied on a pro-rata basis if an AVC TC-4 satisfies the conditions of the Basic Bundled Offer for certain days during a Billing Period but not others.

For the purposes of this rule, a "day" means the period from 12:00am to 11:59pm based on the local time in Sydney.

- (b) In addition to the amounts payable under section 1.1(a), an **Overage Charge** applies per Billing Period in respect of the total CVC TC-4 capacity utilised by RSP in conjunction with TC-4 Bundle AVCs, calculated as follows:

$$\frac{\text{Sum of Total Daily Overage for each day in the Billing Period}}{\text{Number of days in the Billing Period}}$$

where:

**Total Daily Overage** means, for a given day, the sum of Daily AVC Overage for all TC-4 Bundle AVCs supplied to RSP on that day.

**Daily AVC Overage** will be calculated as follows for each TC-4 Bundle AVC in respect of a given day:

$$(\text{Daily AVC Peak Utilisation} - \text{CVC Inclusion}) \times \text{Overage Amount}$$

except that Daily AVC Overage for a given day will be:

- zero if that TC-4 Bundle AVC is supplied in a CSA that is not an Eligible CSA for that day;
- zero if that TC-4 Bundle AVC is supplied in a CSA that is an Eligible CSA for that day and Daily AVC Peak Utilisation is less than or equal to the CVC Inclusion; and
- the Maximum Daily AVC Overage Amount if that TC-4 Bundle AVC is supplied in a CSA that is an Eligible CSA for that day and the equation above would otherwise result in an amount that is greater than the Maximum Daily AVC Overage Amount.

**Daily AVC Peak Utilisation** means, in Mbps, in respect of a TC-4 Bundle AVC on a given day, the download usage (in megabits) observed by **nbn** for that TC-4 Bundle AVC in the CSA Peak Hour for the CSA in which that TC-4 Bundle AVC is supplied, divided by 3600 (seconds).

**CSA Peak Hour** means, in respect of a CSA on a given day, the 60-minute period during which **nbn** observes the highest aggregate download usage (in megabits) across all AVC TC-4 Product Components supplied to RSP on that day in that CSA. If a 60-minute period spans two days, it will be counted as part of the day in which the 60-minute period begins.

**CVC Inclusion** means, on a given day in respect of a TC-4 Bundle AVC, the CVC TC-4 inclusion that applies for that TC-4 Bundle AVC on that day, as set out in section 1.1(a).

**Eligible CSA** means, for a given day, a CSA in respect of which the total Daily AVC Peak Utilisation for all TC-4 Bundle AVCs in that CSA for that day is (in aggregate) greater than or equal to 700 Mbps.

**Overage Amount** means the amount specified in the table below:

Period	Overage Amount
1 July 2023 to 30 June 2024	\$5.50
1 July 2024 to 30 June 2025	\$4.50
1 July 2025 to 30 June 2026	\$3.50
1 July 2026 and onwards	\$0.00

**Maximum Daily AVC Overage Amount** means, in respect of a TC-4 Bundle AVC on a given day, the Bundled Offer Ceiling minus the recurring Charge per Billing Period that applies on that day for that TC-4 Bundle AVC, as set out in section 1.1(a).

**Bundled Offer Ceiling** means \$58.53.

- (c) For the purposes of section 1.1(b), **nbn** will exclude from the calculation of the Daily AVC Overage for a TC-4 Bundle AVC any CVC TC-4 bandwidth capacity utilisation in conjunction with that TC-4 Bundle AVC for any period during which **nbn** cannot accurately observe, or access the observation of, such utilisation.
- (d) Despite clause B1.4 of the [Head Terms](#), the Overage Charge will not be subject to any adjustment on a pro rata basis in any circumstances.

**Notes:**

<sup>1</sup> The Overage Charge is effectively pro-rated for the days on which each TC-4 Bundle AVC is supplied, by operation of the formula used to calculate the Overage Charge in section 1.1(b), without the further application of clause B1.4 of the [Head Terms](#).

<sup>2</sup> For the purposes of section 1.1(b), a "day" means the period from 12:00am to 11:59pm based on the local time in Sydney.

### Notes:

- The amount of one symmetrical AVC TC-1 of 0.15Mbps is included in the recurring Charge for the AVC TC-4 and UNI bundle as specified in section 1.4. Accordingly, for the supply of any symmetrical AVC TC-1 of 0.15Mbps and above for an Ordered Product, **nbn** will not charge RSP, or will provide RSP with a rebate or credit, for an amount equal to the recurring Charge of one symmetrical AVC TC-1 of 0.15Mbps specified in the table above.
- To be read subject to section 34 of the [nbn® Ethernet Product Terms](#) in relation to the Satellite Test Service.

- (b) The recurring Charges per Billing Period for the CVC-TC-1 Product Component are:

	100	100	Enhanced-12 (24/7)	\$175.00

**Notes:**

<sup>1</sup> Each AVC TC-2 Product Component listed in this table is supplied in accordance with the specified TC-2 Bundle Charge for the AVC TC-2, CVC TC-2 inclusion and Enhanced Fault Rectification Service inclusion, and is not available under a separate standalone Charge.

Additional CVC TC-2 Charges apply in accordance with sections 1.6(b) and 1.6(c) for any CVC TC-2 Ordered Product Components supplied to RSP in excess of the total CVC TC-2 inclusions associated with all AVC TC-2 Product Components supplied to RSP.

None of the TC-2 Bundle Components are automatically provisioned. RSP may order any CVC TC-2 bandwidth profile available under the [nbn® Ethernet Product Description](#). RSP must then order the relevant AVC TC-2 Product Component with the relevant Enhanced Fault Rectification Service Product Feature, and associate the AVC TC-2 Product Component with the CVC-2 Product Component. If RSP orders an Enhanced Fault Rectification Service other than Enhanced-12 (24/7) (**Alternative ESLA**), **nbn** will charge RSP for that Alternative ESLA in accordance with the relevant Charge set out in section 2.2 or 9 (as applicable), in addition to the recurring Charge that applies to the TC-2 Bundle Components set out in the above table.

<sup>2</sup> To be read subject to section 3.4 of the [nbn® Ethernet Product Description](#).

- (b) In addition to the amounts payable under section 1.6(a), but subject to section 1.6(c), the recurring Charge per Billing Period for the CVC TC-2 Product Component is:

Recurring Charge per provisioned symmetrical Mbps (CIR)
\$17.50

- (c) The recurring Charge in section 1.6(b) in respect of each CVC TC-2 in each Billing Period will be reduced by the aggregate CVC TC-2 bandwidth inclusions (in Mbps) that apply to all AVC TC-2 Product Components associated with that CVC TC-2 in that Billing Period, in accordance with the following formula (provided that the Charge for each CVC TC-2 will never be less than \$0):

$$\text{Charge} = (\text{Ordered Bandwidth} \times \$17.50) - (\text{Included Bandwidth} \times \$17.50)$$

Where:

**Ordered Bandwidth** means, across a Billing Period in respect of a CVC TC-2, the aggregate CVC TC-2 bandwidth capacity (in Mbps) ordered by RSP and provisioned in respect of that CVC

TC-2 (with changes in capacity across that Billing Period accounted for on a pro-rata daily basis).

**Included Bandwidth** means, across a Billing Period in respect of a CVC TC-2, the aggregate CVC TC-2 bandwidth inclusions (in Mbps) that apply to all AVC TC-2 Product Components associated with that CVC TC-2 (with changes in the aggregate of the inclusions across that Billing Period accounted for on a pro-rata daily basis).

**Note:** The reduction to the Charge for a CVC TC-2 Product Component under section 1.6(c) may be applied by way of a credit, omitting or not listing the relevant Charges, or as otherwise notified by **nbn** to RSP.

## 1.7 NNI

- (a) The recurring Charges per Billing Period for the NNI Bearer Product Component of **nbn**<sup>®</sup> Ethernet are, subject to sections 1.7(b) to 1.7(c):

- (i) one NNI Group comprising either:
    - (A) one 10G NNI Bearer operating in Single Chassis mode; or
    - (B) a pair of 10G NNI Bearers operating in Diverse Chassis mode; and

(b) Any Charge applicable under this section 6 will be calculated by reference to the greater of:

- (i) the total number of AVCs associated with the relevant CVC TC-4 at any time during the calendar week in which the excess usage occurred; and
  - (ii) the minimum number of AVCs that RSP was required to associate with the relevant CVC TC-4 at any time during the calendar week in which the excess usage occurred under section 2.2(d) of the [nbn® Ethernet Product Description](#).
- (c) The total number of AVCs associated with a CVC TC-4 during each calendar week will be calculated by including each AVC which has been associated with the CVC TC-4 at any time during the calendar week, regardless of whether RSP dissociated any such AVC from that CVC TC-4 at any time during the calendar week.
- (d) If RSP exceeds both the average download limitation and the average upload limitation set out in section 4.5(a) of the [nbn® Ethernet Fair Use Policy](#), a single Charge will apply under this section 6, the amount of which will be the highest applicable amount for those two excesses as calculated under sections 6(a) to 6(c).
- (e) If RSP exceeds the average download and upload limitations set out in section 4.5(a) of the [nbn® Ethernet Fair Use Policy](#) on multiple occasions in a Billing Period, a single Charge will apply under this section 6, the amount of which will be the highest applicable amount for any of those occasions as calculated under sections 6(a) to 6(d).
- (f) For the purposes of this section 6, a "calendar week" means the period from 12:00am Sunday to 11:59pm Saturday (AET).

- (b) Subject to section 7(d), RSP must pay the Charge calculated in accordance with section 7(c) below if:
  - (i) RSP's **nbn®** Ethernet Ordered Product includes an AVC TC-2 Product Component and **nbn** designates that Network Activity is required in respect of that **nbn®** Ethernet Ordered Product to attempt to achieve the CIR Objective in accordance with sections 4.5.2.2 and 5.2.8 of the [WBA Operations Manual](#); and
  - (ii) either:
    - (A) the order for that AVC TC-2 Product Component is cancelled; or
    - (B) within 12 months after the day on which **nbn** completes the order for that Product Component:
      - (1) the Product Component is disconnected; or
      - (2) RSP submits a Modify Order to modify the AVC TC-2 bandwidth profile for that **nbn®** Ethernet Ordered Product:
        - a. from 10 Mbps (CIR) or 20 Mbps (CIR) to 5 Mbps (CIR);
        - b. from 10 Mbps (CIR) or 20 Mbps (CIR) to 0; or
        - c. from 5 Mbps (CIR) to 0.

**Charge = (Pre Disconnection Modification Charges - Post Disconnection Modification Charges) x Shortfall Period**

Where:

- (i) **Pre Disconnection Modification Charges** means:
  - (A) in the case of a cancellation, the recurring Charges for the TC-2 Bundle Components that would have been applicable had that order completed; and

- (ii) **Post Disconnection Modification Charges** means:
  - (A) in the case of a cancellation or disconnection, nil; and
  - (B) in the case of a modification, the recurring Charges for the TC-2 Bundle Components applicable after the modification of the AVC TC-2 bandwidth profile, as set out in section 1.6.
- (iii) **Shortfall Period** means:
  - (A) in the case of a cancellation, 12 months; and
  - (B) in the case of a disconnection or modification, 12 months less the period during which the Pre Disconnection Modification Charges applied, calculated on a pro rata daily basis.
- (d) The Charge set out in this section 7 will not apply if:
  - (i) **nbn** has undertaken Network Activity activities in respect of the relevant **nbn**® Ethernet Ordered Product and has notified RSP, in accordance with the [WBA Operations Manual](#), that Network Activity to achieve the CIR Objective was unsuccessful; or
  - (ii) the **nbn**® Ethernet Ordered Product is disconnected following acceptance by **nbn** of a Service Transfer Order and the Other Gaining RSP has ordered an AVC TC-2 Product Component with a bandwidth profile with a CIR Objective that is the same as, or higher than, the CIR Objective applicable to the Losing RSP's AVC TC-2 Product Component.
